

FLEMING STEEL ERECTORS BUTLER MR-24 STANDING SEAM METAL ROOFING EXPERTS

70+ MILLION SQUARE FEET INSTALLED...AND COUNTING!

At Fleming Steel Erectors, we believe that the quality and integrity of a roofing system is vital to the overall health and longevity of a building. That's why we recommend Butler's MR-24 standing seam metal roofing system for every division 13 project we take on. The Fleming team has been installing Butler roofing since 1969, and some of our original collaborations are still going strong!

BUILT FAST

The FSE team is dedicated to providing best-in-class roofing installation management on paper and in the field. Our experience on both the design and construction sides of Butler roofing projects results in new roof installations and retrofits that are completed on-time and on-budget.

BUILT SAFE

FSE takes jobsite safety very seriously. We employ a zero-harm, behavior-based safety credo that impacts every aspect of the project – from materials and site organization to daily planning and timelines. In addition, we use Butler's Sky-Web Fall Protection system and strictly adhere to all OSHA guidelines to insure the day-to-day safety of our installation teams.

BUILT RIGHT

FSE understands the Butler roofing system perhaps better than anyone else. We have decades of roofing design and installation experience and are often called upon to correct improperly installed roofs from other companies. That's why some of the biggest manufacturers in the United States – from Wal*Mart to Amazon – trust FSE with their roof construction projects.
